

LSR Inclinometer

**BEST OF
CLASS**

The JEWELL LSR Series meets the needs of applications with space constraints. The compact, cylindrical shape and the "stacking" feature of the LSR facilitate the use of several inclinometers when multi-axis measurement is required. The LSR offers precise readings with high outputs at lower range frequencies.

¹ Full Range is defined "from negative full input angle to positive full input angle."

² Nonlinearity is specified as deviation of output referenced to theoretical sine function value, independent of misalignment.

³ Output Phase angle = -90°.

⁴ Unit Power connections can be easily adapted for operations from single-ended, floating power supplies of 24 to 36 Volts DC.
