

## Features

- **2 torque ranges**
  - 1/10 - 1/2 of the 1st measuring range
- integral signal amplifier
- low moment of inertia
- single supply voltage
- wide range of applications
- contactless output signals
- no maintenance
- compact
- speed measurement (option)
- angle measurement (option)

The dual-range torque sensor is perfectly suited for use as a test-bench sensor. It is custom-built to measure **two ranges synchronously without change-over (!)**: both peak torque and operating torque are very accurately measured. A 100 % overload protection for the large load offers additional protection against transient overloads.

As the supply voltage and measurement output are transmitted without any physical contact, the device can operate continuously with negligible losses and without the need for maintenance.

The integrated measurement amplifier outputs an analog, electrically isolated 0 to  $\pm 10$  V signal per measurement range for a 12 V DC supply voltage.

The advantages of this sensor are its high torque bandwidth as well as in the reduction of change-over time and conversion costs.

The sensor is suited for measurements on electric motors, friction measurements in gearboxes, performance measurements, generator tests and automated inspection applications.

### Technical Specifications DRDL

Supply voltage:	12 V DC $\pm$ 10 %
Current consumption:	< 200 mA
Rise time 10-90 %:	2 ms
Limit frequency -3 dB:	200 Hz
Voltage output:	0 to $\pm$ 10 V
Internal resistance:	100 $\Omega$
Ripple:	< 100 mV <sub>ss</sub>
Nonlinearity:	< 0,1 %
Hysteresis:	< 0,1 %
Deviation at zero point:	$\leq \pm$ 100 mV
Max measurement error:	0,1 % (FS / of full scale)
Operating temperature:	0 - 60 °C
Compensated temperature range:	5 - 45 °C
Temperature error	
Zero point:	0,02 % / K
Sensitivity:	0,01 % / K
Mechanical overload:	100 %
Internal protection:	IP 40 DIN 40050
Connection:	12pin- connector
Factory calibration Right-/ left load in 25% steps. Special calibration on request.	
<b>EMV Immunity for interference (DIN EN 61326-1 / EN 61000-6 ) *1</b>	
Enclosure	Severity
HF line interference	
150 kHz - 80 MHz (AM)	10 V
ESD (Electrostatic discharge)	Air 8 kV / Kontakt 4 kV
Enclosure	
Electromagnetic Field	
80 Mhz - 1000 MHz (AM)	10 V/m
150 kHz - 80 MHz (AM)	20 V/m
Leads - Connection Cable	
Burst (fast transients)	2 kV
*1 Severity / Criterion: industrial environment; Cable lenght $\leq$ 30 m. Application not outside buildings.	
<b>Interference Emission (EN 55011)</b>	
Disturbance Voltage (electromagnetic Disturbances)	Class B (150 kHz - 30 MHz)
Radiated Emission (electromagnetic Disruption axis)	Class B ( 30 MHz - 1000 MHz)

Speed Option (n)	
max. rev.:	up to 10 000 min <sup>-1</sup> *
Output:	Open-Collektor
Internal pull up:	10 k $\Omega$ (5 V Level)
External pull up:	24 V max
I max:	20 mA
Pulses / rev.:	60
* with additional external wiring 20.000 min <sup>-1</sup> (or speed max.)	

Angle Option (w)	
max. rev.:	up to 3 000 min <sup>-1</sup> **
Output:	Open-Collektor
Internal pull up:	10 k $\Omega$ (5 V Level)
External pull up:	24 V max
I max:	20 mA
Pulses / rev.:	360
Resolution:	1°
Phase shift	Channel A 90° at right spin of propulsion side.
** with additional external wiring 15.000 min <sup>-1</sup> (or speed max.)	

### Mechanical Dimensions DRDL
